## Framework for Progression in Mathematical Calculation

### Introduction

This document and the progressions for developing effective methods of calculation have been compiled by a consortium of first and middle schools from the Wimborne area and adopted as the agreed route to efficient calculation.

This framework details the key written methods of mathematical calculation to be taught. Its purpose is to promote a consistent and progressive approach to the teaching of mathematical calculation skills, in line with the expectations of the 2014 Mathematics curriculum. Although the main focus of this policy is on the progression to pencil and paper procedures it is important to recognise that the ability to calculate mentally underpins all calculation. Written calculation methods are not a replacement for mental calculation but structures to enable more complex calculations to be carried out efficiently. In every written method there is an element of mental processing. Written recording both helps children to clarify their thinking and supports and extends the development of more fluent and sophisticated mental strategies.

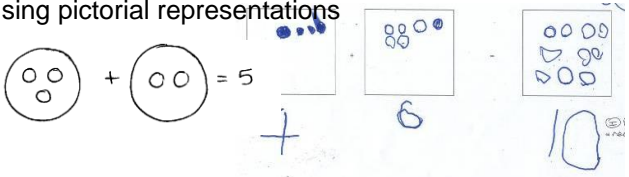

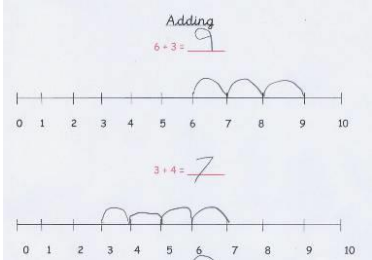

A sound understanding of the number system is essential for children to carry out calculations efficiently and accurately. Written methods of calculations are based on mental strategies. Each of the four operations builds on mental skills, learned in working with a range of manipulative equipment, which provide the foundation for jottings and informal written methods of recording. These mental skills lead on to more formal written methods of calculation. Strategies for calculation need to be supported by familiar models and images to reinforce understanding. When introducing a new strategy it is important to start with numbers that the child can easily manipulate so that they can understand the concept then, as competence increases, larger and more complex numbers can be tackled. Previous stages may need to be revisited to consolidate understanding when introducing a new strategy. The transition between years should not be hurried as not all children will be ready to move on to the next stage at the same time. Progression to the next stage should be made when mastery of the current stage is evident. Progression should be based on attainment across the mathematics curriculum and not just in the calculation processes. Judgements of mastery should be based on evidence gathered in routine classroom assessments and tasks of the pupils competence and accuracy in applying methods learned.

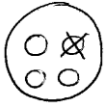

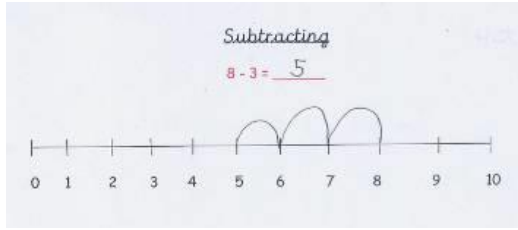

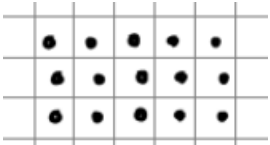

The long-term aim for our children is to have, and be able to select from, a variety of efficient (accurate, reliable and quick) methods of calculation that are appropriate to solve a range of calculation problems.

They should do this by always asking themselves:

- 'Can I do this in my head?'
- 'Can I do this in my head using drawings or jottings?'
- 'Do I need to use a written method?'

## Calculation Framework (NC 2014)

	Addition Mentally (Including Jottings)	Addition Written
Year 1	<ul style="list-style-type: none"> <li>represent and use number bonds within 20</li> <li>represent number pairs to = 10</li> <li>use number pairs to = 10 to work out number pairs to = 20</li> <li>represent doubles up to double 10</li> <li>represent number bonds to make 3, 4, 5, 6, 7, 8, 9 in all ways using addition</li> <li>use number bonds to make 3, 4, 5, 6, 7, 8, 9</li> <li>add one-digit and two-digit numbers to 20, including zero</li> <li>using concrete objects (including exchanging Tens &amp; Ones)</li> </ul>	<ul style="list-style-type: none"> <li>read, write and interpret mathematical statements involving addition (+) and equals (=) signs</li> </ul> <p><math>5 + 7 =</math></p> <ul style="list-style-type: none"> <li>solve missing number problems (using numbers up to 20)</li> </ul> <p><math>7 = \_ + 2</math></p>
	 <p>- using pictorial representations</p> 	

	<p style="text-align: center;"><b>Subtraction Mentally (Including Jottings)</b></p> <ul style="list-style-type: none"> <li>represent and use subtraction facts within 20, relating them to the corresponding addition facts (see addition)</li> <li>represent halves of even numbers up to 20</li> <li>subtract one-digit and two-digit numbers to 20, including zero</li> <li>using concrete objects (including exchanging Tens &amp; Ones)</li> </ul> <p style="text-align: center;">- using pictorial representations</p>   	<p style="text-align: center;"><b>Subtraction Written</b></p> <ul style="list-style-type: none"> <li>read, write and interpret mathematical statements involving subtraction (-) and equals (=) signs</li> </ul> <p>15 - 5 =</p> <ul style="list-style-type: none"> <li>solve missing number problems (using numbers up to 20)</li> </ul> <p>7 = ___ - 9</p> 
<p><b>Year 1</b></p>	<p style="text-align: center;"><b>Multiplication Mentally (Including Jottings)</b></p> <ul style="list-style-type: none"> <li>calculate the answer to multiplication problems (with the support of the teacher) (using numbers up to 20)</li> <li>using concrete objects</li> </ul>  <p style="text-align: center;">- using pictorial representations</p>   <p style="text-align: center;">- using arrays 5 x 3 = 15</p>	<p style="text-align: center;"><b>Multiplication Written</b></p> <p>(mental with jottings only)</p>

### Division Mentally (Including Jottings)

- calculate the answer to division problems (with the support of the teacher) (using numbers up to 20)
- using concrete objects

- using pictorial representations

- using arrays

$$15 \div 3 = 5$$

### Division Written

(mental with jottings only)

# Calculation Framework (NC 2014)

**Year 2**

## Addition Mentally (Including Jottings)

- recall and use addition facts to 20 fluently, and derive and use related facts up to 100
- recall number pairs to = 10
- recall number pairs to = 20
- derive number pairs to = 100 in multiples of 10
- derive number pairs to = 100 e.g.  $43 + ? = 100$
- recall doubles up to double 10
- recall number bonds to make 3, 4, 5, 6, 7, 8, 9 in all ways using addition
- derive additions of multiples of 10
- add a two-digit number and ones (using numbers up to 100)
- add a two-digit number and tens (using numbers up to 100)
- add two two-digit numbers (using numbers up to 100)
- add three one-digit numbers
- using concrete objects (including exchanging Tens & Ones)

- using pictorial representations

- mentally (with jottings)

$24 + 36 = 60$	$36 + 24 = 60$
$20 + 30 = 50$	
$4 + 6 = 10$	
$24 + 36 = 60$	$36 + 24 = 60$

## Addition Written

- add a two-digit number and ones (using numbers up to 100) (no bridging the tens, bridging the tens)

$$\begin{array}{r} 18 \\ + 7 \\ \hline 25 \end{array}$$

Calculation to be set out in columns to support the understanding of place value. However, this should be solved using a range of strategies, not standard column method. e.g. Number line, Dienes, Numicon, diagrams and jottings. Partitioning & exchanging should be included.

- add a two-digit number and tens (using numbers up to 100)

$$\begin{array}{r} 34 \\ + 20 \\ \hline \end{array}$$

NOTE: See text box above.

- add two two-digit numbers (using numbers up to 100) (no bridging the tens, bridging the tens)

$$\begin{array}{r} 34 \\ + 23 \\ \hline \end{array} \quad \begin{array}{r} 67 \\ + 29 \\ \hline \end{array}$$

NOTE: See text box above.

**Year 2**

**Subtraction Mentally (Including Jottings)**

- recall and use subtraction facts to 20 fluently, and derive and use related facts up to 100
- use number bonds to make 3, 4, 5, 6, 7, 8, 9 to work out subtractions i.e. use reversals.
- represent  $5 + 3 = 8$ , therefore  $8 - 3 = 5$
- recall halves of even numbers up to 20
- subtract a two-digit number and ones
- subtract a two-digit number and tens
- subtract two two-digit numbers
- subtract three one-digit numbers
- using concrete objects (including exchanging Tens & Units)

- using pictorial representations

- mentally (with jottings)

$54 - 27$        $54 - 20 = 34$

$- 4 = 30$

$- 3 = 27$

**Subtraction Written**

- subtract a two-digit number and ones (no bridging the tens, bridging the tens)

$15 - 7 =$

$$\begin{array}{r} 15 \\ - 7 \\ \hline \end{array}$$

Calculation to be set out in columns to support the understanding of place value. However, this should be solved using a range of strategies, not standard column method. e.g. Number line, Dienes, Numicon, diagrams and jottings. Partitioning & exchanging should be included.

- subtract a two-digit number and tens

$67 - 20 =$

$$\begin{array}{r} 67 \\ - 20 \\ \hline \end{array}$$

NOTE: See text box above.

- subtract two two-digit numbers (no bridging the tens, bridging the tens)

$23 - 12 =$

$$\begin{array}{r} 23 \\ - 12 \\ \hline \end{array}$$

$$\begin{array}{r} 43 \\ - 27 \\ \hline \end{array}$$

NOTE: See text box above.

**Year  
2**

**Multiplication Mentally (Including Jottings)**

- recall and use multiplication facts for the 2, 5 and 10 multiplication tables
  - recognise odd and even numbers
  - calculate mathematical statements for multiplication within the multiplication tables
- using materials

- using mental methods (with jottings)  
5, 10, 15, 20, 25

**Multiplication Written**

- write calculations using the multiplication (x) and equals (=) signs
  - calculate mathematical statements for multiplication within the multiplication tables
- using arrays

$4 \times 5 = 20$

- using repeated addition:

$4 \times 5 =$   
 $5 + 5 + 5 + 5 = 20$

This can be done on a number line.

**Division Mentally (Including Jottings)**

- recall and use division facts for the 2, 5 and 10 multiplication tables
  - use 2x table to divide by 2, counting in multiples or reversing the calculation
  - use 10x table to divide by 10, counting in multiples or reversing the calculation
  - use 5x table to divide by 5, counting in multiples or reversing the calculation
  - calculate mathematical statements for division within the multiplication tables
- using materials

- using mental methods (with jottings)

**Division Written**

- write calculations using the division (÷) and equals (=) signs
  - calculate mathematical statements for division within the multiplication tables (i.e. no remainders)
- using arrays

$30 \div 2 = 15$

- using repeated addition

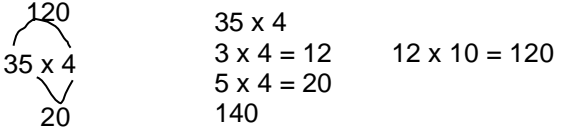

$15 \div 5 =$   
5 10 15

This can be done on a number line.

Tools to aid multiplication in division calculations

**Bar Method**

**Double Number Line Method**

This method of multiplication uses know or easily computable facts, by doubling and halving or addition, to construct the data needed to carry out the calculation. There is no need to calculate all values from 1 times to 10 times, only those needed.
